- Problem Statement Title:- Smart City Data Analyzer
- Team Leader Name: - Sayli Borade
- Group No:- 60
- Team Name:- Bug Creator
- Members:- Gayatri Khushalani
Chetana Tijare

IDEA TITLE

Smart City Data Analyzer

- A Smart City Data Analyzer that integrates fragmented urban datasets.
- Collects data from traffic systems, air quality monitors, energy grids, and public transport.
- Data visualization to convert raw data into actionable insights.
- Provides a clean dashboard interface for city administrators.
- Enables real-time monitoring and predictive analytics for better decision-making.

FEASIBILITY AND VIABILITY

- Technical feasibility: Built with existing tools.
- Scalability: Can expand to multiple cities and integrate new datasets easily.
- Challenges: Data may be in different formats.
- Strategies:
 - Use APIs to connect data.
 - Keep data secure with encryption.
 - Start small (traffic + pollution) and expand later

IMPACT AND BENEFITS

- Social: Improves quality of life with better traffic flow, cleaner air, and efficient services.
- Economic: Optimizes resource allocation, reducing waste and costs.
- Environmental: Supports sustainability by monitoring pollution and energy usage.
- Governance: Helps city planners make data-driven decisions quickly.
